

1. Need to add an extended part to the ultrasonic sensor holes in order to control its sound beam. A sample SolidWorks file is attached below to provide an idea of its structure, **but we need to figure out how to mount it to the previous structure**. The dimensions of the clip are the same as those provided in the SolidWorks design.

2. Need to modify the vertices and some edges of the display hole. Here is how it should be adjusted.

3. No need to change the dimensions of the OLED hole, as the newly ordered OLED fits well into it.
