

Improvements

1.Edges Design Modification:

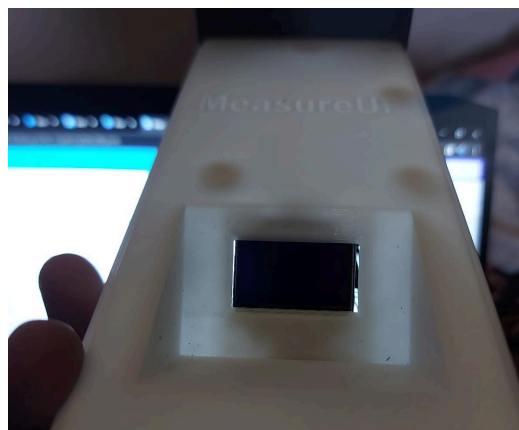

Make the edges curved like this and remove the slope on the other side.

2.Display Opening:

The hole for the screen doesn't fit the display perfectly. There are small gaps on both sides.

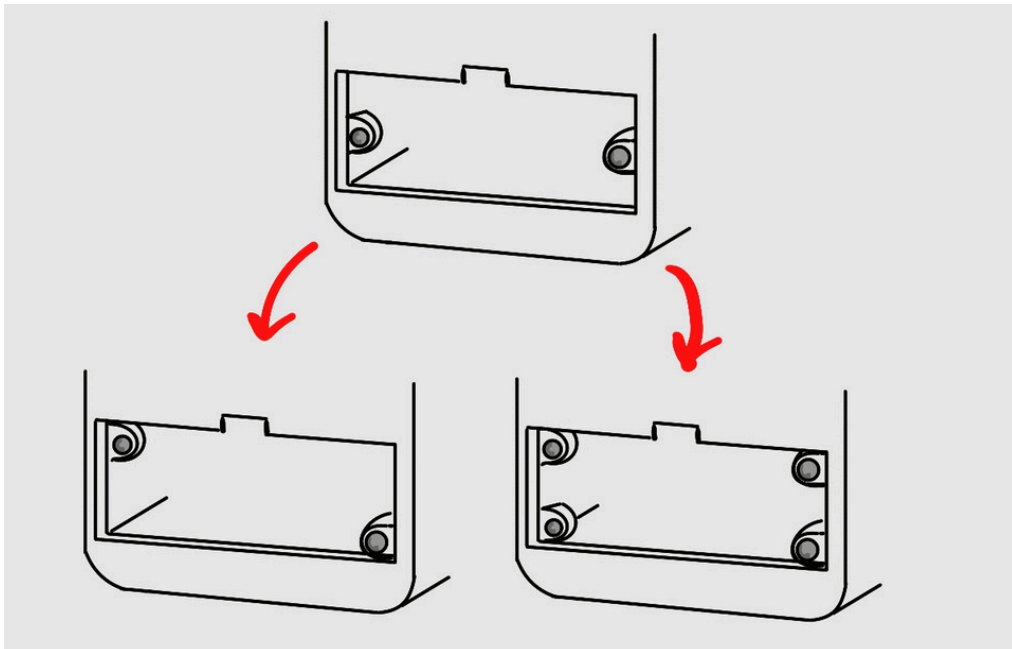

3.Switch Hole:

The switch we're using is smaller than the hole you made. Can you make the hole smaller so it fits the switch? Also, it would be cool if the switch hole is lower, so it's easy to turn the device on/off even if it's high on the wall.

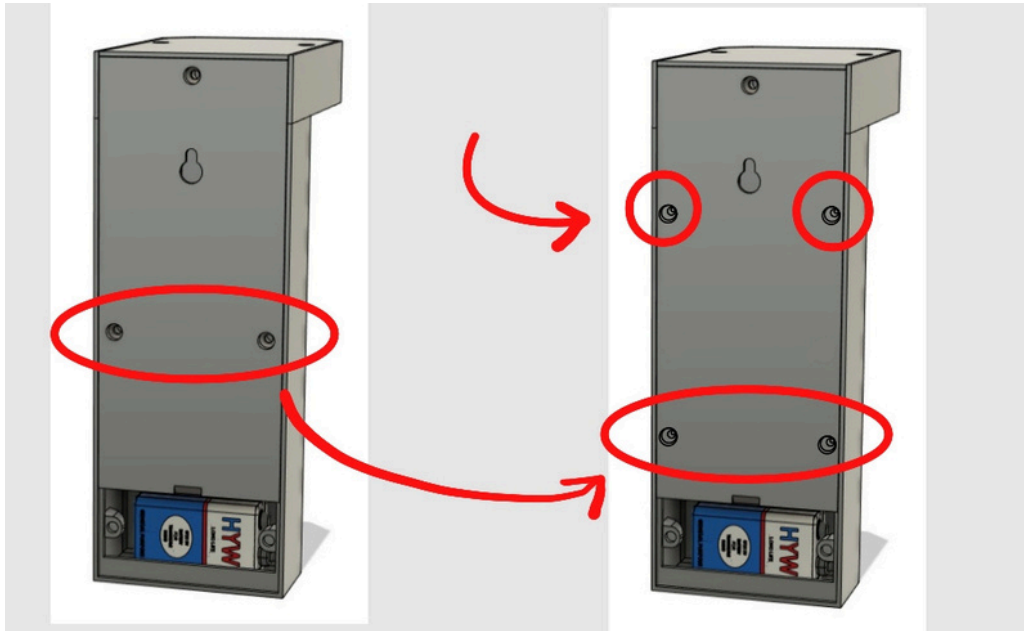

4. Battery Hole:

The magnets on both sides of the battery hole make it hard to put in the battery. Can you move one magnet up and the other down, so there's space in the middle for the battery?

5. Back Cover:

The back cover only has three screws, and it bends when you press it. Maybe add more screws or move them around?

6. Logo:

Use the new logo I sent you instead of the old one. It looks better!
